Introducing *Shock Wave Therapy* to Cramer Chiropractic!

ESWT is Extracorporeal Shock Wave Therapy, and it is the delivery of Acoustic Sound Shock waves with high peak pressure and short duration.

(The concept of shockwave therapy has been around for over 4 decades, with the Most Common usage being Lithotripsy in the hospital to break up kidney stones...)

Shock Wave Therapy is similar to the effects of STEM CELL Injections (without the massive cost), for *nagging/debilitating Chronic Pain:*

Shock Wave Therapy can Stimulate collagen production and increase circulation (neovascularization), reduce scar tissue formation, and is effective for pain relief in the following Chronic Inflammatory Musculoskeletal Conditions including those conditions which have not responded to conservative management:

Plantar Fasciitis

Shoulder Pain/Rotator Cuff/Tendinopathy

Elbow Pain/Epicondylitis

Knee Pain/osteoarthritis/Patellar Tendinopathy

Hip Pain/GTPS (Greater Trochanteric Pain Syndrome)

Ankle Pain/Achilles Tendinopathy
